

Cut Resistant technology - ENERGIAPURA

The National Team's race suit integrates the Energiapura cut-resistant layer, an essential technical barrier designed to protect athletes from injuries caused by ski edges in the event of a fall.

Certified according to the European standard EN 388:2016 (levels 3 and 4) and compliant with FIS CRG 2021 tests, the system guarantees a high level of protective performance with a FIS rating from 3 to 5 stars. Despite its robustness, the technical fabric is extremely soft, lightweight, and elastic, ensuring a comfortable fit that replaces traditional underwear.

The innovation includes an exclusive patented system to facilitate cutting the seams in medical emergencies and the integration of the ICE-KEY chip for immediate access to medical data via smartphone.

Starting from the 2025/26 season, the use of these protective pants has become mandatory for all competitive categories, raising safety standards in alpine skiing.
